SUMMARY

I am a full-stack developer with over 3 years of professional experience delivering ERP platforms, e-commerce solutions, social network systems, and DPM software. I am currently pursuing a Master's degree in Applied Information Technology at the University of Industry and Trade in Ho Chi Minh City (HUIT). My work is driven by clean system design, solid domain modeling, and a practical approach to building software that lasts. I actively explore AI-assisted development to improve engineering productivity, delivery speed, and solution quality.

CORE TECHNOLOGIES

Current Core Stack

.NET | React | SQL Server | Azure DevOps

Frontend

React | Angular | Vue.js | Bootstrap

Infrastructure & Tools

RabbitMQ | Elasticsearch | Azure DevOps | Docker | CI/CD

Library Development

Reusable .NET libraries | NuGet packages | Modular SDK-style components

Backend

.NET | Laravel | gRPC | Microservices

Architecture & Engineering

Clean Architecture | Domain-Driven Design | CQRS | Microservices thinking

Databases

SQL Server | PostgreSQL | MySQL

AI & Productivity

AI-assisted development | AI integration in software | Productivity-oriented engineering workflows

Software Experience

Enterprise systems | ERP | E-commerce | Social platforms | DPM software

PROFESSIONAL EXPERIENCE

Developer

Vu Thao Technology

01/2026 - Present

- Migrate the legacy DPM (Digital Process Management) system from SharePoint to a new .NET + React platform.
- Analyze process flows, approvals, forms and SharePoint data for migration into the new system.
- Implement backend/frontend features with .NET and React based on migrated business logic.
- Coordinate testing, business validation and bug fixing during migration.
- Improve maintainability after moving away from the SharePoint platform.

Full-Stack Developer

COGAIN Corporation

03/2025 - 12/2025

- Delivered enterprise business systems across backend services, frontend applications, data storage and release workflows.
- Applied Clean Architecture, domain modeling, CQRS and microservices thinking to structure complex business products.
- Worked with .NET, React, SQL Server and Azure DevOps across product development workflows.
- Integrated Power BI, OpenAI and SQL Server stored procedures for internal business systems.
- Built reusable components and refactored shared backend/frontend foundations for maintainability.

Full-Stack Developer

GOSOFT Technology Company Limited

04/2023 - 03/2025

- Delivered e-commerce, ERP and social network software across database, API and web admin layers.
- Built reusable menu packages, base components and internal code-generation tooling.
- Worked with maintainability-focused enterprise software domains where business clarity and extensibility mattered.
- Guided new team members, reviewed code and collaborated through Agile/Scrum workflows.

EDUCATION

MSc in Applied Information Technology

01/2025 - Present

Ho Chi Minh City University of Industry and Trade (HUIT)

Academic track focused on applied information technology.

Information Technology Engineer

01/2024 - 06/2024

Ho Chi Minh City University of Industry and Trade (HUIT)

Software Technology specialization

Bachelor of Information Technology

09/2020 - 12/2023

Ho Chi Minh City University of Industry and Trade (HUIT)

Software Technology specialization

CERTIFICATES

English B1 Certificate

03/2025

European Framework of Reference

B1 level

Pedagogical Training Certificate

10/2025

Hanoi Pedagogical University 2

Excellent grade

PROFESSIONAL HIGHLIGHTS

End-to-end enterprise delivery

Design and deliver business systems across backend services, frontend applications, data storage, messaging and release workflows.

Architecture discipline

Apply Clean Architecture, Domain-Driven Design, CQRS and microservices thinking to keep complex products structured and scalable.

Reusable engineering components

Build reusable .NET libraries, modular SDK-style components and NuGet packages to improve consistency across teams and products.

Enterprise product mindset

Work comfortably across enterprise software domains where maintainability, extensibility and business clarity matter.

RESEARCH INTERESTS

Enterprise software architecture

Clean Architecture, DDD, CQRS, microservices and distributed integration patterns for long-lived maintainable systems.

Data mining & user behavior analysis

Data Mining, ABSA and recommendation systems for extracting product and user behavior insights.

AI-assisted software engineering

AI integration in products and engineering workflows to improve software capability, delivery speed and technical quality.
